**Establishing Industry Trends & Best
Practices in Safety-Sensitive Industries**

INTRODUCTION

DISA counts a broad spectrum of safety-sensitive owners/operators as both customers and members of our consortium network. We make a concerted effort to offer them as much industry insight as possible so that they're better able to make informed decisions for their businesses.

Part of that effort includes outreach. We recently conducted a survey of diversified industrial owners within our consortium about their individual employee screening processes.

SURVEY GOAL

Our goal is to better understand specific industry best practices and share them with other owners who might realize efficiencies as a result, or simply find the reassurance that their own practices are being utilized elsewhere.

The results of this survey are contained within this report. We hope you find this information useful, and we look forward to supplying further insight into industry best practices.

SURVEY METHODOLOGY

We had more than 60 sites in the Oil & Gas, Chemical, and Energy markets participate. The incentive for participation was to get a high level report back that compares their facilities to the best practices across the industry.

Owner Survey results are confidential and are not shared, except when included in high level analysis like this report. 70+% of owners that participated are using DISA Global Solutions in some capacity for employee/contractor screening.

We are always looking for more owners to participate in our new quarterly surveys. To participate in our next Owner Survey, with a focus on Site Access Requirements, please email ownersurvey@disa.com.
